

contractor safety

The current situation of the labour market and the ever increasing focus of companies on their core business means it is common for services to be subcontracted to third-party companies.

The companies which subcontract these services must ensure that the third-party companies and their workers comply with all established safety rules.

In this situation it is necessary to ensure that the workers of the subcontracted company are properly trained in order to carry out their work safely.

use

This Subcontractor Safety application, along with the recommended practice, will allow you to:

- Automate the records for subcontracted companies and their employees.
- Control the documentation required for each company in accordance with its level of risk, along with the expiry date for this documentation.
- Register the training required for each subcontracted worker.
- Document the coordination meetings held with subcontracted companies.
- Know at all times the documentation not handed over or expired, along with training.
- Immediately identify when a company fails to fulfil the requirements for access.

this software application is recommended if...

- You want to extend good safety practice to the subcontractors.
- You require a tool which helps control the documentation and training of the subcontracted companies.
