

safety inspections

Safety Inspections have points in common both with the Safety Observations and with the Safety Audits, with one approach or another being more important in different organisations. In any case, it involves the planned observation of material and technical aspects in the inspected installation, typically using a checklist to ensure the inspection is exhaustive.

It is important that the person, who directs the inspection, is competent with regards to the production process, knows and has analysed the latest accidents and incidents which have come about in the division, and is accompanied by the divisional head in order to ensure full involvement in the software application.

use

This Inspections application, along with the recommended practice, will allow you to:

- Plan safety inspections indicating regularity, area, matter and person in charge.
- Implement your own checklist based on the items to be inspected.
- Show the general result of the inspection.
- Assign and monitor the proposed corrective actions by e-mail.

this software application is recommended if...

- Your aim is to reinforce the involvement of all employees in safety management.
- You have staff trained to carry out regular inspections.
- You wish to achieve excellence in safety management.
